

AHMED FARID

Senior Software Engineer · Laravel + Next.js · Multi-Tenant SaaS & Real-Time Systems

In Dubai, UAE

ahmed@iamahmedfarid.com | +971 58 556 2001 | iamahmedfarid.com | LinkedIn | GitHub

SUMMARY

I take systems **end to end** — schema, API contracts, interface, infrastructure, and the delivery after launch. My last two years have been **multi-tenant SaaS and real-time systems**, where two users are never allowed to disagree about what just happened: live auction state, debt-recovery pipelines, payment and KYC flows. Laravel and Next.js at the core, **Arabic-first RTL** where the market needs it, across the Gulf, the US and the UK.

27+ products across 17+ countries | 9+ platforms architected end to end | 12+ apps live on iOS & Android

TECHNICAL SKILLS

FRONTEND	Next.js (App Router, SSR, SSG, edge caching) · React · TypeScript · JavaScript (ES6+) · Vue · Redux · Zustand · TanStack Query
UI	Tailwind CSS · shadcn/ui · MUI · design systems & multi-brand theming · RTL / i18n · responsive & accessible layout
BACKEND	Laravel · PHP · Node.js · Express · NestJS · FastAPI · Django · Python · Go
MOBILE	Flutter · Dart · BLoC · App Store & Google Play release
DATA	MySQL · PostgreSQL · MongoDB · Redis · pgvector
INFRA	AWS (EC2, RDS, S3) · Docker · GitHub Actions · Nginx · Cloudflare · CI/CD
SYSTEMS	Multi-tenant SaaS · Real-time & WebSockets · Event-driven architecture · REST API design · RBAC · SSO / OAuth 2.0 · JWT · Queues & background jobs · Idempotency & ordering guarantees
PRACTICES	Agile / Scrum · Automated testing · Trunk-based delivery · Code review · Agentic SDLC — specs executed by coding agents, reviewed commit by commit
AI	RAG · Agent orchestration & tool calling · Multi-LLM gateways (OpenAI, OpenRouter) · TTS & image gen Arabic native · English professional

EXPERIENCE

Recovery Advisers — Senior Software Engineer

Jul 2025 – Present

Dubai, UAE · Full-time, Remote · Owns architecture, schema, API contracts and production delivery

- Multi-tenant debt-recovery platform with a **six-stage lifecycle** — leads → cases → mandates → litigation → recoveries → invoices — where **role-based access is enforced at the data layer, so the UI never has to hide what a user could otherwise reach**.
- Replaced polling with **event-driven, webhook-based synchronization** to client environments. **Per-case sequence numbers carry the ordering guarantee**, so a mirrored state machine cannot move backwards on a late or duplicated delivery — and the dispatch side stays stateless.
- Built the **client self-service portal in Next.js 15** on that sync — a separate frontend for creditors and law firms, fully isolated from the internal operational platform.
- Single sign-on through Microsoft Entra ID (OAuth 2.0 / OIDC)**, with Microsoft 365, Zoho Books and Teams consolidated behind one interface. Next.js 15, Laravel 13 with Octane and Reverb for real-time, MySQL.

Yelo — Senior Software Engineer

Jun 2024 – Aug 2025

Saudi Arabia · Full-time, Remote

- Real-time B2B2C vehicle auction where **the server, not the client, decides bid order**. Live bid state in Redis with atomic increments, broadcast over Socket.IO — **sub-200ms bid-to-broadcast, with no lost bids or duplicate winners under final-second load**.
- Proxy auto-bidding resolved server-side: bidders set a ceiling and win at the lowest necessary price.
- One Laravel 11 API serving three shipped clients** — a Next.js 14 web app plus **iOS and Android from a single Flutter codebase, both live on the App Store and Google Play**, sharing an Nx monorepo so types and business rules were defined once. The auction UI stays correct through the final seconds when hundreds of bids land at once, in **full Arabic/English RTL** — not a mirrored stylesheet.
- Payment and identity flows on screen: Amazon Payfort checkout, OTP/KYC authorization, PDF/QR invoicing, plus a full inventory state machine from listing to delivery. Shipped trunk-based on Docker, GitHub Actions and AWS.

Arab Bank — Software Engineer

Mar 2024 – May 2024

Cairo, Egypt · Short-term engagement, On-site

- Backend services, APIs and business logic for digital banking operations inside a regulated financial environment.

RevealSite — Software Engineer

May 2023 – Mar 2024

United States · Full-time, Remote

- **Multi-brand theming at production scale** — one white-label codebase rendering **12+ separately branded pharmacy storefronts for 13+ brands** across the US and UK, each with its own identity and workflow configuration, all shipped from a single release pipeline.
- Prescription refill and transfer, appointment booking, medication reminders and two-way patient messaging, on a shared multi-tenant architecture.
- Automated pharmacy request routing through fax and email workflows with Django and Celery, removing manual handling.

OWN PRODUCTS

Built and operated solo on my own infrastructure — product decisions, engineering and support.

Applyni — Founder & Sole Engineer

applyni.com

Saudi-first AI career agent — multi-step agent pipeline with review gates · Next.js (App Router), TypeScript strict, Supabase/PostgreSQL, Vitest

- **21 feature modules, 54 migrations, 96 test files** — auth, résumés, matching, campaigns, credits, billing, notifications and admin, shipped and running in production.
- **Architecture enforced, not assumed** — repositories are the only layer permitted to touch the database, environment is validated at boot, and AI and email providers are mockable so local development never reaches production. Arabic RTL-first throughout.
- **Explainable matching, by constraint** — the product spec carries prohibitions as well as features: never fabricate candidate information, never promise interviews, no invented ATS scores. A weak match is stated as weak, with the factors that could not be verified named rather than averaged away.

SELECTED FREELANCE & CONTRACT WORK

Run alongside the roles above — engagements are listed with their own dates.

Independent Consultant — Senior Software Engineer

Jan 2022 – Present

Remote

- **27+ products shipped for 8+ companies across 17+ countries; 9+ architected end to end as sole engineer**, from first schema to production deployment — spanning SaaS, healthcare, e-commerce, education and climate.
- **Qoralia** — React interface for AI-assisted decarbonization planning: the model surfaces candidate grants, deterministic scoring decides eligibility, and the UI shows which rule produced each answer. FastAPI, PostgreSQL + pgvector.
- **Phonic Maps** — multi-tenant location management for franchise operators, syncing reviews across Google Business Profile, Meta and X with bulk auto-reply.
- **KhebraOS** — Arabic-first academy builder: the interface was designed RTL from the first component rather than flipped later, with AI course generation on top.
- **Test-covered delivery** — IbdAA Course ships **174 tests and 616 API assertions**.

Interactive Future — Software Engineer

Jun 2024 – Dec 2024

Saudi Arabia · Contract, Remote

- Full-stack feature work on enterprise travel technology platforms — backend services, APIs and database-driven workflows.

almentor — Software Programming Instructor

Jun 2024 – Nov 2024

Cairo, Egypt · Freelance, Remote

- **Mentored engineers** through live backend, frontend and database work built around shipping real projects; ran code reviews and set engineering standards.

Compass Med — Software Engineer

Aug 2021 – Dec 2023

Cairo, Egypt · Part-time, Hybrid · alongside university

- Built the e-commerce platform: Odoo ERP integration, wallet and coupon systems, shipping automation.

EDUCATION

B.Sc. Computer Science & Artificial Intelligence — Helwan University, Cairo

2019 – 2023
